

MetaSpark Presale Relaunch

Please read the information below regarding our upcoming presale relaunch. It includes information on how you can withdraw your funds from DxSale and what the plans for the relaunch are.

Why are you relaunching presale?

To ensure the best possible launch, we have decided to cancel the old presale so we can make some improvements to our contract and tokenomics ahead of launch. We have resubmitted the changes for a new audit and have uploaded the results [here](#).

When and where will you relaunch?

[DxSale Presale](#): 21st April (1pm UTC)

Token Launch: 24th April (TBC)

What about my BNB from the old presale?

As we have cancelled the [old DxSale listing](#), you can claim a refund using the [Withdraw Funds](#) button that will appear on the listing.

This Sale has ended!
Please click the button below to withdraw your contributions.
(Note only presale participants can withdraw)

[WITHDRAW FUNDS](#)

Make sure you are connected to the wallet you used to invest with and on the BSC network. Please also make sure you are on the dx.app domain prior to connecting your wallet.

Do I need to reinvest in the new presale or will my BNB transfer over automatically?

The process is **not automatic**. If you wish to participate in the new MetaSpark Presale, you will need to first manually withdraw your BNB from the old presale listing (as shown above) and then reinvest it in the new presale.

How do I receive my tokens and bonuses?

Presale tokens can be claimed via DxSale after completion of presale. Private sale tokens will be airdropped to holders after liquidity is added to PancakeSwap. Referral bonuses will be airdropped to all holders a week after token launch.

Will the Soft and Hard Caps change?

Our previous listing raised 230 BNB before we cancelled it. As we want to create buy pressure on launch, we have decided to go with a **100 / 200 BNB** Soft and Hard Cap.

You can read more about this in our [litepaper](#).

What about whitelists?

Everyone who contributed to the old presale or already had previously acquired a whitelist will be whitelisted again for the new presale. As our Hard Cap is lower than what we already raised, we cannot accept new whitelists. We will however, open the presale to everyone **after 24 hours** of launching.

How will a smaller Hard Cap affect the roadmap?

As you would expect, less funding will have an impact on our project and roadmap. There's less talent we can hire and less resources we can acquire to accelerate progress. That said, we have always had talent in-house to build the platform. All this means is we'll need to re-evaluate the timing and priorities of our roadmap. As such, we will launch **Roadmap 2.0** after presale.

Are there changes to the buy and sell taxes?

In the interest of maintaining buy pressure, incentivising holding and maximising liquidity for price support, we have adjusted the taxes to promote a healthy chart as follows:

	Buy Tax %	Sell Tax %
BUSD Rewards	3	5
Marketing	3	5
Community Wallet <i>(Liquidity, Buybacks, Private Sale Refund, Rewards & Giveaways)</i>	3	5

You can read more about this in our [litepaper](#).

What about Private Sale - will there be Vesting?

We recognise the concern of Private Sale investors having a significant advantage over everyone else at launch. Instead of forcing vesting onto Private Sale holders, we have done our best to come up with a solution that benefits all parties involved.

These changes are as follows:

1. We have closed the advantage gap between Private Sale investors and Presale investors at launch. The new token prices are below:

	SPARK per BNB
Private Sale	1,200,000
Presale	1,100,000
Launch	1,000,000

2. As Private Sale investors were promised a significant upside to their investment, we have created a Community Wallet tax pool (see above) that will initially be used to **pay back up to 50%** of their investment, provided they **hold all SPARK tokens** acquired through Private Sale. Repayments will be in BNB and on a bi-weekly basis with the first occurring 2 weeks after launch.

What this means is we can **minimise sell pressure** on the token at launch whilst also upholding our promise to Private Sale investors.

You can read more about this in our [litepaper](#).
